

Lifting Repairs and Refurbishments to a New Level

PCS offers customized maintenance programmes for your crane operations. This monitors and minimises equipment failure.

We schedule:

- 🔧 Statutory inspection as per OHS Act;
- 🔧 Maintenance work;
- 🔧 Load testing.

PCS manages computer controlled systems to highlight appropriate service intervals for specific equipment and to provide information in the case of a breakdown. We offer convenient planning schedules which allows us to inform our clients when their cranes are due for proactive maintenance.

The database records all proactive and all reactive maintenance on an ongoing basis and is categorised as follows:

- 🔧 Breakdowns
- 🔧 Load testing
- 🔧 Servicing
- 🔧 Repairs from service.

Various reports can be created from this information and emailed to the client, pinpointing areas where unnecessary spending occurs due to operator error or the unit has reached the end of its economical life cycle allowing for more accurate budgeting.

Upgrade and modernisation

From a small modification such as the installation of a push button remote or joystick remote control, to a complete refurbishment. PCS can restore your out dated poor performance crane to that of a crane with all the latest systems thereby providing you with reliability and lower running costs.
