

Mining

## Lifting Mining Operations

At PCS we pride ourselves on supporting the mining industry with advanced crane technology and world class maintenance systems.

The mining industry's equipment maintenance cranes are designed for:

- ↳ Heavy duty cycles;
- ↳ Highly corrosive operating environments;
- ↳ Abnormal lifting.

Mining industry crane requirements:

- ↳ High lifts
- ↳ Difficult operating conditions
- ↳ Extra heavy-duty or oversized components (motors and controls).

PCS' design and manufacturing departments are familiar with large cranes, especially in the hostile mining environment. These cranes are developed for servicing heavy duty mining equipment.

With superior performance, safety and space saving designs for loads up to 160t, there is a hoist for every application.
